SUMMARY

DevOps and System Admin with close to 2 years of experience in software development environments. Experience implementing key DevOps concepts as containerization, virtualization, version control, database management, administration and monitorization.
I am always looking to learn and improve personally and professionally and eager to make a positive impact.

EXPERIENCE

Junior DevOps

AUGENTIC TECH

📅 06/2022 - Present   📍 Porto, Portugal (Remote)

Primarily focusing on configuring production environments, building and maintaining CI/CD pipelines, and monitoring infrastructures and applications in cloud environments.

- Reduced the deployment time of new microservices through the integration of automated building and deployment processes using CI/CD tools such as GitLab CI/CD or GitHub Actions, in conjunction with Docker Swarm;
- Delivered to clients a solution to monitor all the application infrastructure and microservices to ensure high performance and availability with Prometheus and Grafana;
- Insured reliability and availability of applications by implementing DB clusters in PostgreSQL/MongoDB;
- Accelerated response time to issues by implementing a comprehensive solution that monitors all applications and infrastructure across the company with icinga2;
- Responsible for production deployments;
- Optimized application code by collaboratting with development team.

AutoCAD Drafter

Ambiestudos

📅 2019 - 2022   📍 Fafe, Portugal
